

Data Request Form

To obtain data from the European Vegetation Archive (EVA), please first make an enquiry to the EVA database administrator Ilona Knollová (ikuzel@sci.muni.cz) whether the data meeting your needs are available. If they are, please fill in the form below and submit it to Ilona or another member of the EVA Coordinating Board.

- Applicant's name:

Inez Woltjer

- Applicant's institutional address:

Wageningen Environmental Research, P.O. Box 47, 6700AA, Wageningen

- Applicant's e-mail:

Inez.woltjer@wur.nl

- Project title:

LIMEN – European Protected Biodiversity Outside The Gold-Green Zone In Limburg

- Brief description of aims and methods of the study:

Answer the question how nature outside the borders of the national-nature-network-zone in Limburg contributes to the condition of European protected species within the Province. Included in the analysis are natural areas abroad, in a 15 km wide zone around Limburg. This 15 km zone contains areas in Germany and Belgium.

- Will someone else be involved in data editing or analysis in addition to the applicant?

Only colleagues within Alterra. Note that EVA coordinating board member Hennekens has a role in the LIMEN-project, and may guarantee the correct use of EVA data rules.

- Estimated time of delivery of results (e.g. manuscript submission):

01-07-2018

- Geographic area needed (e.g. countries or range of geographic coordinates):

Germany and Belgium within a zone of 15 km around Limburg

- Do you need plots to be georeferenced? If so, what is the minimum accuracy of plot location (in metres or kilometres) needed for your project?

Yes. Any accuracy is fine.

- Vegetation types needed (syntaxa):

All

- Other data selection criteria:

Data Request Form

- Envisaged publications:

Report

- Plant trait data from the TRY consortium. If you plan to combine your analysis of vegetation-plot data with plant trait data, you can also request for a dataset of 18 gap-filled traits for a large number of plant taxa prepared by the TRY consortium. These traits include Leaf area, Specific leaf area, Leaf fresh mass, Leaf dry matter content, Leaf C, Leaf N, Leaf P, Leaf N per area, Leaf N:P ratio, Leaf delta15N, Seed mass, Seed length, Seed number per reproductive unit, Dispersal unit length, Plant height, Stem specific density, Stem conduit density, and Conduit element length. This dataset can be provided to you from the EVA manager together with the vegetation-plot data. If you use this dataset, you must inform about your project the TRY data contributors who might be potentially interested and invite them as potential co-authors, assuming they will make an intellectual contribution to your paper. The list of the TRY data contributors will be sent to you together with the gap-filled trait dataset.

No

- Specification of the co-authorship arrangements in publications based on the requested data. Note that the EVA Rules recommend that co-authorship is offered to a representative of each database providing data that are particularly important for the project (e.g. unique vegetation types, under-represented geographic areas) or make up more than 10% of the final dataset (5% threshold can be considered too). These database representatives should be experts in the topic of the project (they do not need to be the custodians or deputy custodians) and they should contribute to the project more than just by providing the existing data, e.g. by intellectual contribution to the concept of the paper, preparation of new data, or helping with data analysis, interpretation of the results or writing parts of the paper (see the IAVS Code of Professional Ethics: <http://iavs.org/Governance/Code-of-Professional-Ethics.aspx>). The project leader should enable active participation by regularly informing potential co-authors about the progress of the project from its early stage. The project leader should also make final co-authorship arrangements based on the real input of the individual contributors.

In the report the EVA-datasets used, and their custodians will be mentioned.

- Eligibility of the applicant to receive EVA data. Specify to which EVA database the applicant has contributed; if the applicant is not the custodian or deputy custodian of an EVA database, give a name of a custodian or deputy custodian who supports this data request.

The project is approved by Stephan Hennekens, deputy custodian of EU-NL-001 Dutch National Vegetation Database” and member of EVA coordinating board

I agree with the terms of EVA Data Property and Governance Rules as approved on 26 May 2012 (<http://euroveg.org/download/eva-rules.pdf>).

If I ask for the plant trait data from TRY, I agree to invite to my project the TRY data contributors following the list received from the EVA database manager.
