

Data Request Form

To obtain data from the European Vegetation Archive (EVA), please first make an enquiry to the EVA database administrator Ilona Knollová (ikuzel@sci.muni.cz) whether the data meeting your needs are available. If they are, please fill in the form below and submit it to Ilona or another member of the EVA Coordinating Board.

- Applicant's name:

dr. John Janssen, dr. Rienk-Jan Bijlsma

- Applicant's institutional address:

Wageningen Environmental Research, Wageningen, The Netherlands

- Applicant's e-mail:

john.janssen@wur.nl

- Project title:

Ecology and management of *Helosciadium repens*

- Brief description of the aims and methods of the study:

We study the ecology of the Natura 2000 species *Helosciadium repens* in the Province Zeeland in the Netherlands and in adjacent Belgium, aiming at an advice on the optimal hydrological conditions and management in the Natura 2000 sites. A minor part of the introduction of the study is to provide an overview of the plant communities in which the species grows in Europe. For that we request for these EVA data.

- Will someone else be involved in data editing or analysis in addition to the applicant?

Ecologists of INBO, Belgium

- Estimated time of delivery of results (e.g. manuscript submission):

Report: end 2020; possibly paper during EVS meeting 2021

- Geographic area needed (e.g. countries or range of geographic coordinates):

Europe

- Do you need plots to be georeferenced? If so, what is the minimum accuracy of plot location (in metres or kilometres) needed for your project?

No

- Vegetation types needed (syntaxa):

-

- Other data selection criteria:

Presence of species *Helosciadium repens* (= *Apium repens*)

Data Request Form

- Envisaged publications:

WEnR report, later possibly a paper on the European syntaxonomical position of the species

- Plant trait data from the TRY consortium. If you plan to combine your analysis of vegetation-plot data with plant trait data, you can also request for a dataset of 18 gap-filled traits for a large number of plant taxa prepared by the TRY consortium. These traits include Leaf area, Specific leaf area, Leaf fresh mass, Leaf dry matter content, Leaf C, Leaf N, Leaf P, Leaf N per area, Leaf N:P ratio, Leaf delta15N, Seed mass, Seed length, Seed number per reproductive unit, Dispersal unit length, Plant height, Stem specific density, Stem conduit density, and Conduit element length. This dataset can be provided to you from the EVA manager together with the vegetation-plot data. If you use this dataset, you must inform about your project the TRY data contributors who might be potentially interested and invite them as potential co-authors, assuming they will make an intellectual contribution to your paper. The list of the TRY data contributors will be sent to you together with the gap-filled trait dataset.

No

- Specification of the co-authorship arrangements in publications based on the requested data. Note that the EVA Rules recommend that co-authorship is offered to a representative of each database providing data that are particularly important for the project (e.g. relatively large proportion of the final dataset used in the analyses or data from unique vegetation types or under-represented geographic areas). This database representative should be an expert in the topic of the project (not necessarily the custodian or deputy custodian), and this person should contribute to the project more than just by providing the existing data, e.g. by intellectual contribution to the concept of the paper, preparation of new data, or helping with data analysis, interpretation of the results or writing parts of the paper (see the IAVS Code of Professional Ethics: <http://iavs.org/Governance/Code-of-Professional-Ethics.aspx>). The project leader should enable active participation by regularly informing potential co-authors about the progress of the project from its early stage. The project leader should also make final co-authorship arrangements based on the real input of the individual contributors.

In case we will write a paper on the European syntaxonomical position (which is not the main aim of the study) we will invite authors who contributed more than 10% of the releves. In all cases we invite experts who study *Helosciadium repens* in their own country to contribute to this study. In the report we will acknowledge all data sources, and we will send copies to all contributors of data.

- Eligibility of the applicant to receive EVA data. Specify to which EVA database the applicant has contributed; if the applicant is not the custodian or deputy custodian of an EVA database, give a name of a custodian or deputy custodian who supports this data request.

John Janssen is custodian of [EU-00-017](#) European Coastal Vegetation Database and contributor to [EU-NL-001](#) Dutch National Vegetation Database.

- I agree with the terms of EVA Data Property and Governance Rules as approved on 26 May 2012 (<http://euroveg.org/download/eva-rules.pdf>).
- In any result obtained based on this data, I will cite the EVA report paper (Chytrý et al. 2016; <https://doi.org/10.1111/avsc.12191>). In addition, I will cite individual source databases used in my project (if possible, in the list of References; if not possible, at least as a list of databases in the electronic supplementary material).

Data Request Form

- If I ask for the plant trait data from TRY, I agree to invite to my project the TRY data contributors following the list received from the EVA database manager.

Wageningen, 2020 June 16th

John Janssen
