

ReSurveyEurope

Project Metadata Form

When contributing data to ReSurveyEurope, please fill in this form for each resurvey project and send it to Ilona Knollová (ikuzel@sci.muni.cz) together with the database. A resurvey project is understood as repeated sampling of a certain type of vegetation in a certain study area using specific methods.

- PROJECT NAME (identical with the Resurvey Project name given in the database):

Wet Meadows Trebon

- FULL PROJECT NAME (use if the full project name is longer than used in the database):

Wet meadows near Třeboň

- REFERENCE (publication or URL or DOI of the dataset if published online):

Prach K. (2008): Vegetation changes in a wet meadow complex during the past half century. Folia Geobot. 43: 119-130.

Prach K. (1993): Vegetational changes in a wet meadow complex, South Bohemia, Czech Republic. - Folia Geobot. Phytotax., Praha, 28: 1-13.

- DATA OWNER: person(s), institution(s):

- METHODS (description of sampling design and methods):

Study of a long-term vegetation changes under changing management in wet meadows near Třeboň (Deschampsion cespitosae, Phalaridion, Caricion gracilis). Type of plots: semipermanent plots, recently recorded by GPS (accuracy 3m), earlier repeated only in the same segment of the wet meadows with the estimated accuracy ± 10 m. Cover scale: r, +, %, recorded in 1956, 1984, 1989, 1995, 2001, 2006, 2011, 2016, 2021.

- ENVIRONMENTAL DATA (list of environmental data measured):

- MANIPULATED PLOTS (description of the treatment if the plots were manipulated, e.g. mowing twice a year, fertilizing by NPK once a year, post-fire succession)
