

## ReSurveyEurope

### Project Metadata Form

When contributing data to ReSurveyEurope, please fill in this form for each resurvey project and send it to Ilona Knollová ([ikuzel@sci.muni.cz](mailto:ikuzel@sci.muni.cz)) together with the database. A resurvey project is understood as repeated sampling of a certain type of vegetation in a certain study area using specific methods.

- PROJECT NAME (identical with the Resurvey Project name given in the database):

South Bohemia floodplain forests

- FULL PROJECT NAME (use if the full project name is longer than used in the database):

South Bohemia floodplain forests

- REFERENCE (publication or URL or DOI of the dataset if published online):

- DATA OWNER: person(s), institution(s):

- METHODS (description of sampling design and methods):

Study of vegetation changes in alluvial and alder carr forests in the southern part of the Czech Republic (*Alnion incanae*). Type of plots: semipermanent plots, recently (2022–2023) recorded by GPS (accuracy 5 m); original vegetation plots (recorded by GPS, accuracy 5 m) were sampled in 2004–2006. Cover scale: 9-step version of Braun-Blanquet scale; r, +, 1, 2m, 2a, 2b, 3, 4, 5.

- ENVIRONMENTAL DATA (list of environmental data measured):

- MANIPULATED PLOTS (description of the treatment if the plots were manipulated, e.g. mowing twice a year, fertilizing by NPK once a year, post-fire succession)

V Praze, 20.8.2024
