

ReSurveyEurope

Project Metadata Form

When contributing data to ReSurveyEurope, please fill in this form for each resurvey project and send it to Ilona Knollová (ikuzel@sci.muni.cz) together with the database. A resurvey project is understood as repeated sampling of a certain type of vegetation in a certain study area using specific methods.

- PROJECT NAME (identical with the Resurvey Project name given in the database):

PSET Vireennes

- FULL PROJECT NAME (use if the full project name is longer than used in the database):

Temporal socio-ecological profile of Vireennes peatland

- REFERENCE (publication or URL or DOI of the dataset if published online):

- DATA OWNER: person(s), institution(s):

UniVegE-Universite Clermont Auvergne

- CONTACT E-MAIL:

camille.roux@uca.fr; gilles.thebaud@uca.fr

- METHODS (description of sampling design and methods):

The method consists of setting up a temporal socio-ecological profile (PSET) in the field, a permanent sequence made up of several segments, corresponding to a given surface, delimited and geo-referenced, in which vegetation surveys are carried out with abundance coefficients (Braun-Blanquet old or new), over time.
A GPS point is made at each end of the profile sequences and a metal terminal (or magnet) is also driven into the ground. Floristic surveys are carried out along the profile with an equivalent spacing (0.5m, 1m...) for all the sequences of the profile.

- ENVIRONMENTAL DATA (list of environmental data measured):

- MANIPULATED PLOTS (description of the treatment if the plots were manipulated, e.g. mowing twice a year, fertilizing by NPK once a year, post-fire succession)
