

ReSurveyEurope

Project Metadata Form

When contributing data to ReSurveyEurope, please fill in this form for each resurvey project and send it to Ilona Knollová (<u>ikuzel@sci.muni.cz</u>) together with the database. A resurvey project is understood as repeated sampling of a certain type of vegetation in a certain study area using specific methods.

- PROJECT NAME (identical with the Resurvey Project name given in the database):
 LOTVS_75_Vandvig
- FULL PROJECT NAME (use if the full project name is longer than used in the database):
 LOTVS_75_Vandvig
- REFERENCE (publication or URL or DOI of the dataset if published online): doi: 10.1111/j.1365-2664.2005.00982.x
- DATA OWNER: person(s), institution(s):
 Vigdis Vandvik (Department of Biological Sciences, University of Bergen, Norway)
- CONTACT E-MAIL: vigdis.vandvik@uib.no
- METHODS (description of sampling design and methods):
 59 permanent 1 m² quadrats located on a coastal heathland in Lurekalven, Norway. Two treatments (grazed vs. ungrazed) were established across three contrasting habitats. All the plots were burnt in April 1994, and the grazing pressure has been c.1 sheep ha⁻¹ yr⁻¹. From 1994 to 2005, all vascular plants, bryophytes and lichens were recorded annually using frequencies (1 m x 1 m metal frame divided into 16 subplots).
- ENVIRONMENTAL DATA (list of environmental data measured):
- MANIPULATED PLOTS (description of the treatment if the plots were manipulated, e.g. mowing twice a year, fertilizing by NPK once a year, post-fire succession)
 Y Two treatments (grazed vs. ungrazed)
