

### Project Metadata Form

When contributing data to ReSurveyEurope, please fill in this form for each resurvey project and send it to Ilona Knollová ([ikuzel@sci.muni.cz](mailto:ikuzel@sci.muni.cz)) together with the database. A resurvey project is understood as repeated sampling of a certain type of vegetation in a certain study area using specific methods.

- PROJECT NAME (identical with the Resurvey Project name given in the database):

LOTVS78\_Woodcok

- FULL PROJECT NAME (use if the full project name is longer than used in the database):

Restoration of floodplain meadows (22 years experiment)

- REFERENCE (publication or URL or DOI of the dataset if published online):

Woodcock B.A., McDonald A.W., Pywell R.F. 2011. Can long-term floodplain meadow recreation replicate species composition and functional characteristics of target grasslands? *J Appl Ecol* 48, 1070–1078.

- DATA OWNER: person(s), institution(s):

Alison W. McDonald, Ben A. Woodcock (point of contact)

bawood@ceh.ac.uk

- METHODS (description of sampling design and methods):

The data set consists of 9 permanent plots at a single-site attempting to recreate an *Alopecurus pratensis*- *Sanguisorba officinalis* floodplain grassland on formerly arable land in Somerford Mead, at the University of Oxford's Field Station, Wytham, UK. In 1986 the study site (3.6 ha) was re-sown with green hay collected from an example of the target community and monitored at the scale of the whole site, using plant quadrats from 1987-1989. From 1989 the site was divided into nine plots of c. 0.4 ha over which three contrasting grazing management practices (control, cattle and sheep) were randomly superimposed. These nine plots were monitored in June of each year from 1991-2009.

- ENVIRONMENTAL DATA (list of environmental data measured):

- MANIPULATED PLOTS (description of the treatment if the plots were manipulated, e.g. mowing twice a year, fertilizing by NPK once a year, post-fire succession)

Grazing by sheep/cattle
