

ReSurveyEurope

Project Metadata Form

When contributing data to ReSurveyEurope, please fill in this form for each resurvey project and send it to Ilona Knollová (ikuzel@sci.muni.cz) together with the database. A resurvey project is understood as repeated sampling of a certain type of vegetation in a certain study area using specific methods.

- PROJECT NAME (identical with the Resurvey Project name given in the database):

Dalby

- FULL PROJECT NAME (use if the full project name is longer than used in the database):

Incl. EU_009a and EU_009b. Dalby Söderskog forest reserve (37 ha), mixed temperate broadleaf forest protected since 1918, but heavily affected by Dutch elm disease and ash dieback, as well as by invasive species (*Arion vulgaris*, *Sus scrofa*).

- REFERENCE (publication or URL or DOI of the dataset if published online):

- DATA OWNER: person(s), institution(s):

Jörg Brunet, Swedish University of Agricultural Sciences (SLU)

- CONTACT E-MAIL:

Jorg.brunet@slu.se

- METHODS (description of sampling design and methods):

74 semi-permanent quadrats. 1 m² quadrats for ground vegetation, 16 m² quadrats for two shrub and two tree layers, with identical centre points. Vernal and summer species included.

- ENVIRONMENTAL DATA (list of environmental data measured):

Canopy cover % of vegetation layers. Soil pH (H₂O) 0-5 cm, soil P, Ca, Mg, K.

- MANIPULATED PLOTS (description of the treatment if the plots were manipulated, e.g. mowing twice a year, fertilizing by NPK once a year, post-fire succession)

Alnarp, 8 August 2022

Jörg Brunet
