

## ReSurveyEurope

## **Project Metadata Form**

When contributing data to ReSurveyEurope, please fill in this form for each resurvey project and send it to Ilona Knollová (<a href="mailto:ikuzel@sci.muni.cz">ikuzel@sci.muni.cz</a>) together with the database. A resurvey project is understood as repeated sampling of a certain type of vegetation in a certain study area using specific methods.

- PROJECT NAME (identical with the Resurvey Project name given in the database):
  Skane (Skåne)
- FULL PROJECT NAME (use if the full project name is longer than used in the database): EU\_041. Sample plots in Quercus robur and Carpinus betulus stands.
- REFERENCE (publication or URL or DOI of the dataset if published online):
- DATA OWNER: person(s), institution(s):
  Jörg Brunet, Swedish University of Agricultural Sciences (SLU)
- CONTACT E-MAIL:
  Jorg.brunet@slu.se
- METHODS (description of sampling design and methods):
  70 permanent 20 x 25 m plots (500 m2). Vernal species not included.
- ENVIRONMENTAL DATA (list of environmental data measured):
  Cover % of ground vegetation and tree canopy. Soil pH (KCl) 0-5 cm, Loss on ignition, base saturation %, Al-content, soil P, C/N ratio.
- MANIPULATED PLOTS (description of the treatment if the plots were manipulated, e.g. mowing twice a year, fertilizing by NPK once a year, post-fire succession)

The data set includes sample plots across an area of ca 5000 km2 in the province of Skåne. Some plots are in unmanaged forest reserves, but many are managed production forests, where we have classified impact of forest management between surveys. A few plots are in wood pastures with livestock grazing.

Alnarp, 8 August 2022
