

**European Vegetation Archive** 

## **Data Request Form**

To obtain data from the European Vegetation Archive (EVA), including the ReSurveyEurope Database, please first enquire the EVA database administrator Ilona Knollová (ikuzel@sci.muni.cz) whether the data that meet your needs are available. If they are, please fill in the form below and submit it to Ilona or another member of the EVA Coordinating Board (or ReSurveyEurope Board if you ask for data from the ReSurveyEurope Database).

- Applicant's name:
   Felix Wetzel
- Applicant's institutional address:
   Institut für Botanik, Sternwartestraße 15, 6020 Innsbruck, Austria
- Applicant's e-mail: felix.wetzel@student.uibk.ac.at
- Project title:
   Ecological niche and accompanying vegetation of Eryngium alpinum in Vorarlberg and Liechtenstein (Master thesis)
- Are you asking for core EVA data (non-repeated vegetation surveys) or for ReSurveyEurope data (repeated vegetation surveys)?
   core EVA data
- Brief description of the aims and methods of the study:

   Aims: investigate the ecological niche of Eryngium alpinum relating to its accompanying vegetation and thereby its growth optimum in the border area
   Vorarlberg/Liechtenstein; comparison with the vegetation of other habitats of the species
   Methods: existing vegetation data is analysed for species association of Eryngium alpinum and own relevés are planned. To investigate the climatic niche of the species,

species distribution modelling is applied. Neighbourhood analyses are used to collect data of the accompanying species and will be assessed by ecological Landolt indicator values.

- Will someone else be involved in data editing or analysis in addition to the applicant?
   Ass.-Prof. Phd Pau Carnicero Campmany, Institut für Botanik, Universität Innsbruck
   Ass.-Prof. Mag. Dr. Konrad Pagitz, Institut für Botanik, Universität Innsbruck
   (both supervisors of the Master thesis)
- Estimated time of delivery of results (e.g., manuscript submission):
   Spring 2024
- Geographic area needed (e.g., countries or range of geographic coordinates):
   Natural range of *Eryngium alpinum* (Austria, Liechtenstein, France, Italy, Switzerland,

Slovenia, Croatia, Bosnia and Herzegovina)

- Do you need plots to be georeferenced? If so, what is the minimum accuracy of plot location (in metres or kilometres) needed for your project?
   Not necessarily, but if possible (min. 2 km)
- Vegetation types needed (syntaxa):
   All types, especially Caricion ferrugineae G. et Braun-Blanquet 1931, Adenostyletalia alliariae Br.-Bl. 1930, Alnion viridis Schnyder 1930
- Other data selection criteria:
   all vegetation data that include *Eryngium alpinum*
- Envisaged publications:
   internal University Innsbruck publications (as usual for Master theses); probably in the publications of the natural history museum Inatura Vorarlberg (Jahngasse 9, 6850 Dornbirn, Austria) which commissioned the Master thesis

Data deposition. Some journals require data used for the analysis to be stored in a public repository to ensure the repeatability of the analysis. According to EVA Rules, you are not allowed to store the original vegetation-plot data obtained from EVA. However, if you plan to publish in such a journal, you may deposit a reduced EVA-derived dataset that (1) would make it possible to repeat the analysis published in the paper and (2) does not contain any information not used in the analysis. For example, such a dataset can contain only a subset of species (e.g., only angiosperms or only neophytes), or replace species names with codes, or replace species cover values with presences/absences, or remove all the header data, or replace the exact plot coordinates by coarse grid-cell coordinates etc. If you plan to deposit reduced information from vegetation plots, please describe here what might be deposited. If the project developed so that you needed to deposit more information than specified here, you would need to ask specific permission from the Custodians of the EVA databases used in your analysis before the dataset is deposited.
 A publication in such journals is not planned at this stage. The possible Inatura

publication would not need dataset deposition.

• Plant trait data from the TRY consortium. If you plan to combine your analysis of vegetation-plot data with plant trait data, you can also request a dataset of 18 gap-filled traits for a large number of plant taxa prepared by the TRY consortium. These traits include Leaf area, Specific leaf area, Leaf fresh mass, Leaf dry matter content, Leaf C, Leaf N, Leaf P, Leaf N per area, Leaf N:P ratio, Leaf delta15N, Seed mass, Seed length, Seed number per reproductive unit, Dispersal unit length, Plant height, Stem specific density, Stem conduit density, and Conduit element length. This dataset can be provided to you by the EVA manager together with the vegetation-plot data. If you use this dataset, you must inform about your project the TRY data contributors who might be potentially interested and invite them as potential co-authors, assuming they will make an intellectual contribution to your paper. The list of the TRY data contributors with the gap-filled trait dataset.

No

• Specification of the co-authorship arrangements in publications based on the requested data. Note that the EVA Rules recommend that co-authorship is offered to a representative of each database providing data that are particularly important for the project (e.g., a relatively large proportion of the final dataset used in the analyses or data from unique vegetation types or under-represented

**European Vegetation Archive** 

## **Data Request Form**

geographic areas). This database representative should be an expert in the topic of the project (not necessarily the custodian or deputy custodian), and this person should contribute to the project more than just by providing the existing data, e.g. by intellectual contribution to the concept of the paper, preparation of new data, or helping with data analysis, interpretation of the results or writing parts of the paper (see the IAVS Code of Professional Ethics: http://iavs.org/Governance/Code-of-Professional-Ethics.aspx). The project leader should enable active participation by regularly informing potential co-authors about the progress of the project from its early stage. The project leader should also make final co-authorship arrangements based on the real input of the individual contributors.

A journal publication is not planned at the present time. The Master thesis has to be written as a monograph, but the source of the requested data will be marked and cited in detail. If a publication is being considered (e. g. by Inatura), co-autorship will be offered.

• Eligibility of the applicant to receive EVA or ReSurveyEurope data. Specify to which EVA or ReSurveyEurope database the applicant has contributed; if the applicant is not the custodian or deputy custodian of an EVA or ReSurveyEurope database, give a name of a custodian or deputy custodian who supports this data request.

Wolfgang Willner

- I agree with the terms of EVA Data Property and Governance Rules as approved on 26 May 2012 (http://euroveg.org/download/eva-rules.pdf).
- If I ask for ReSurveyEurope data, I agree with the terms of ReSurveyEurope Data Property and Governance Rules as approved on 6 April 2022 (http://euroveg.org/download/resurveyeurope-rules.pdf).
- In any result obtained based on EVA core data (non-repeated vegetation surveys), I will cite the EVA report article (Chytrý et al. 2016; https://doi.org/10.1111/avsc.12191). In any result obtained based on the ReSurveyEurope data (repeated vegetation surveys), I will cite the ReSurveyEurope report article as soon as it is published. In addition, I will cite individual source databases used in my project (if possible, in the list of References; if not possible, at least as a list of databases in the electronic supplementary material).
- If I ask for the plant trait data from TRY, I agree to invite to my project the TRY data contributors following the list received from the EVA database manager.

Innsbruck (Austria), 27th August 2023

Felix Weter,

Felix Wetzel
